### Heat Recovery Water Pre-Heaters

These units recover valuable heat that would otherwise go down the shower drain and use it to preheat incoming cold water. The total installed cost is typically \$600 to \$1,000 and you save 10% to 30% of your water heating cost depending on the unit your choose and your water use habits. DWHR units pay for themselves in the 2 to 6 years range in most Canadian homes, don't require maintenance and have no moving parts.
